I have re-worked my files to be "the old way" I was doing things, <Keyword>xxx</Keyword>, for each entry. It isn't killing me, but more setup work.

ezXML was my second choice over expat. It worked fine with the long lines....at first. It is also a tree-based parser. But it has no error checking for bad elements.

Does libxml verify the document like expat?

But yes, I will take a look at it. I like that it can write files, too. Send it to my email.

Thanks
