Thanks, iconification is ok 😊

Have another cosmetic suggest about the title area, actually we have "glSnoop" text only, and mantain it simple is good, however perhaps you may add the version number and the release date aswell, it will be easier for understand instantanely what version of glSnoop we are using

The title area could pick the same text of the version text, like:

glSnoop 0.2 (xx.xxx.2019)
