@walkero

Thanks.

I'm using the latest amigaOS 4.1 FE release (with the latest update, NOT beta).

I tried to search for a game :

```
14.Données:Video/aiostreams> twitch.py -s "Dota 2"  
twitch.py v1.0 - Created by George Sokianos
```

```
<urlopen error unknown url type: https>
```

Channel name	Viewers	Type	Language	Channel URL	Game name -
--------------	---------	------	----------	-------------	-------------

Channel status

Traceback (most recent call last):

File "twitch.py", line 337, in <module>

main(sys.argv[1:])

File "twitch.py", line 315, in main

for stream in streamList['streams']:

TypeError: 'NoneType' object is unsubscriptable

I then tried a channel :

```
14.Données:Video/aiostreams> twitch.py -u https://www.twitch.tv/solar
```

```
twitch.py v1.0 - Created by George Sokianos
```

```
<urlopen error unknown url type: https>
```
