Create (or reopen?) a ticket for PREALLOC if you want, this one I try to fix this weekend. Generally tickets are better so that we don't have to worry about remembering everything.

I see you already deal with it , thanks!

Regarding configure script, I was thinking just applying "theirs" changes and maybe later trying to reapply "ours" changes but my motivation to work with 1 megabyte configure script is very low. Technically 1.2.16 hasn't been released so I haven't been looking into this much. As you say, makefile.amigaos4 works just fine.

Yep, sounds right indeed.

ps. sended you some code in glsnoop ticket
