I just tested it with the 5 top streams available and it seems it works just fine. So, it doesn't seem to be a generic problem.

Please, try to get a list of the Top Streams with:

```
twitch.py -ts
```

Then, please try to play some of the top ones, and inform me if it works.

There is a problem, where I am looking to find a solution, but it is not that simple, where the script stops working when in the title on the stream there is at least one unicode character. Unfortunately, for now these streams are not able to work with my script.
