Is there a way to exit nicely when you type a non existant "twitch_channel" with -CV option?

FOOBAR234 channel doesn't exists:

```
#twitch.py -u https://www.twitch.tv/foobar234 -cv
```

aiostreams v1.3 (2019-09-20) - Developed by George Sokianos

HTTP Error 404: Not Found

URL	Recorded at	Available resolutions	Title
-----	-------------	-----------------------	-------

Traceback (most recent call last):

File "twitch.py", line 323, in <module>

main(sys.argv[1:])

File "twitch.py", line 248, in main

for stream in streamList['videos']:

TypeError: 'NoneType' object is unsubscriptable

#

Very nice/usefull scripts!!!

EDIT:

maybe something like this (twitch.py:247):

```
...
print "%s" % ('-'*200)
if streamList:
    for stream in streamList['videos']:
        resolutions = ', '.join(stream['resolutions'])
        print "%-36st %-20st %-50st %s" % (stream['url'], stream['recorded_at'], resolutions, cmnHandler.
uniStrip(stream['title']))
    else:
        print "Channel '%s' doesn't exist." % (channelName)
....
```
