Thank you very much for trying my scripts. Those scripts help to get a playable video url, which send to the default player you set in the config file. From that point, it has to do with the players. I can't do anything on the way they play the videos.

I am curious, how did you set the Emotion player to work with the videos?

And also, you wrote that you used only twitch.py script but the link you provided at the end is a youtube video.

Am I missing something?

@all

Can you please tell me your opinion on the documentation? Is it easy to understand? Would you need any extra information?
