Hi walkero,

I copied the live link for convenience.

To test your application

this is the configuration file for emotion player:

```
#!/python
autoplay = True
verbose = True
#vPlayer = "APPDIR:Work:MickjT-MPlayer/mplayer-nonaltivec"
#vPlayerArgs = "-vo sdl -ao sdl"
sPlayer = "APPDIR:Work:Player/Emotion/Emotion"
sPlayerArgs = ""
# sPlayer = "/Apps/VLC.app/Contents/MacOS/VLC"
# sPlayerArgs = "-f --no-video-title-show"
```

this with winuae works, I don't have a real machine unfortunately 😞

I read the documentation very quickly just to see if it worked.

I have not yet figured out how to get the list of live shows, then I will look at everything with patience to understand how it works.

I really appreciate every suggestion, thanks!
