@salass00

Thank you both, this combination compiles:

```
extern "C" {  
extern unsigned const int *__newlib_minversion_ptr;  
}
```

```
int main(int argc, char *argv[]) {
```

```
    warning("IDOS: %p", IDOS);
```

```
    warning("Minimum lib version:%u.%u", *__newlib_minversion_ptr >> 16, *__newlib_minversion_ptr & 0xffff);
```

but there is no output, it simply crashes without printing anything, probbaly another mistake by me or the part of code i put it in is yet to be called/used?
