Makefile question.

I'd like to automate the process of building and linking a static library.  
Can this be done in one makefile?

Right now i have this, but ar is never picked up.

```
CXX      = g++
CXXFLAGS = -Wall -Wextra -g -gstabs `sdl-config --cflags --static-libs` -std=gnu++11 -ISDK:local/common
/include/libxml2
SDL_LIBS = `sdl-config --static-libs`
          -ISDL_image -ltiff -lpng -ljpeg -lwebp
          -ISDL
```

```
OBJS =      lots.o of.o o.o files.o
```

```
libmylib.a: $(OBJS)
$(CXX) $(LDFLAGS) -o $@ $(OBJS) $(SDL_LIBS) -lm -lz -lpthread
ar rcsv libmylib.a $(OBJS)
```

clean:

```
rm -f *.o libmylib.a
```

Thank you
