For a static library you only need:

AR = ar

OBJS = lots.o of.o o.o files.o

libmylib.a: \$(OBJS)

\$(AR) -crv libmylib.a \$(OBJS)

clean:

rm -f *.o libmylib.a

Note that for the commands following the dependency rules (ar and rm) you absolutely need to have a tab character at the beginning of the line or they won't work.
