@walkero

thanks for the very accurate explanation.

I am very happy with your application and it will certainly improve in the future.

Odyssey unfortunately, as you said, is very busy with the cpu and lacks some features, actually using a shell is the best choice.

Now the emotion player is perfect in 360p30 I changed some settings in the tooltype of the program.

in 480p30 it slows slightly.

Thanks again.

Separate note:

It's a pity that mickjT-mplayer currently has some problems playing with aiostreams.
