Tested on my X5000/40 and everything from 770 and above crashes instantly my system, which needs a hard reset, With 760 around 254MB were reserved.

Tested with:

- Radeon R9 280X with 3GB Ram
- Warp3D.library v53.27
- Warp3DNova.library v1.66
- RadeonHD.chip v3.6
