I am glad to inform you that a new version of aiostreams scripts is at os4depot upload queue. The new version 1.4.1 is mostly about fixes and a necessary workaround for the Dlive.tv website, which now it seems to work just fine under AmigaOS 4.

Also the issue with twitch and emotion is fixed, although that the other scripts are not going to work with this player, since it doesn't support https video sources.

Please test it. I would be glad to read your feedback.
