Another sh/shell/mkdir question

I've got a mkdir file which features a
for loop

```
for p in plugins/*  
do  
    echo "strip $p -o amigaospath/$p"  
done
```

Now, while the above works perfectly in a shell (within a text file, started with "sh test.sh") it errors out in the
makefile with

Quote:

```
for p in plugins/*  
T:gmake.sh.256.JEHKAK[1]: syntax error: `for' unmatched
```

and i'm puzzled as to why?

Any pointers?

Thank you
