I'm completely lost here 😞

There is all sorts of crazy stuff going on now.

I changed the CXXFLAGS from `-std=gnu++11` to `-std=c++11` and it will error out in configure...that was to be expected, ince vsnprintf is not supported.

I changed it to use none `-std` and now i'm getting a window on `scummvm` start telling me

```
ELF library
Unable to resolve symbol
'_ZdlPvj'
in scummvm
```

Back to using `-std=gnu++11` then and trying your fix
