Thanks for your help, the parameters are right.

but they seem to have no impact on the performance of mickjT-MPlayer or on ffmpeg.

MickjT-MPlayer works perfectly with youtube odyssey SMtube etc. with the parameter -vo sdl

Probably as accented by MickJT the problem could currently be fixed, but at the moment there seems to be problems with the live streaming protocol.

Personally, I'm happy with this script you created.

So thank you again for your great work.

Is it possible in the near future to have a GUI for its use?

Thanks again.

separate note:

I use winuae, so I can't say my experience for a real machine.
