I tested the latest ScummVM and it seems that the internal stack cookie 600000 bytes is not enough. It crashes for me before the menu appears. My default stack is around 132 kilobytes.

If I increase stack to 1000000 and monitor it, it seems that ScummVM is using 69% (690000 bytes) of stack (without game) so it needs more stack.

Please verify this finding and increase the stack cookie value.
