Canary patch evolved from malloc one, so malloc patch shouldn't be needed. Try:

```
nm scummvm | grep malloc
```

...Make sure that malloc symbol is 'T' and not for example 'U' (undefined).

...Add some more DebugPrintF() calls, for example into hacked malloc() function, to see that it's called.

I tried to clone your repo yesterday but sgit gave me 404 in the end. I will try to fork it some day.
