URL:

Are the "yutotools" (autoconf, automake, aclocal etc.) part of the gcc development or are they special?

I'm trying to configure a project, but only get lots of errors

Quote:

```
automake
autom4te: m4sugar/m4sugar.m4: no such file or directory
configure.ac: error: no proper invocation of AM_INIT_AUTOMAKE was found.
configure.ac: You should verify that configure.ac invokes AM_INIT_AUTOMAKE,
configure.ac: that aclocal.m4 is present in the top-level directory,
configure.ac: and that aclocal.m4 was recently regenerated (using aclocal)
automake: error: no 'Makefile.am' found for any configure output
automake: Did you forget AC_CONFIG_FILES([Makefile]) in configure.ac?
```

Quote:

```
/SDK/Local/share/aclocal-1.15/smpeg.m4:13: warning: underquoted definition of AM_PATH_SMPEG
/SDK/Local/share/aclocal-1.15/smpeg.m4:13: run info Automake 'Extending aclocal'
/SDK/Local/share/aclocal-1.15/smpeg.m4:13: or see http://www.gnu.org/software/automake/ ...
ke.html#Extending-aclocal
configure.ac:35: warning: macro 'AM_INIT_AUTOMAKE' not found in library

configure.ac:480: warning: macro 'AM_CONDITIONAL' not found in library
autom4te: m4sugar/m4sugar.m4: no such file or directory

Then again, there is only smpeg.m4 in there, nothing else (and it also tries to access alocal-1.15 dir, which doesn't exist on my sdk - i renamed it for testing)
