Try to just type "gcc -v" , and then it will be understandable if it installed or not, and if it in path or not. Also do "printenv PATH".

Also are you type exactly like that in msys2 console ?

```
"pacman -S --needed base-devel mingw-w64-i686-toolchain mingw-w64-x86_64-toolchain python git subversion  
mercurial mingw-w64-i686-cmake mingw-w64-x86_64-cmake" ?
```

If so, be sure you install 64bit version of msys2 at first.
