@Admins

There is an issue with new uploaded supertuxkart.

I especially upload a new version with a different name, not pure "supertuxkart.lha", but "supertuxkart\_081.lha", because of its very-very different games with the same name.

Old SuperTuxKart (0.6.4), are works over MiniGL.

New SuperTuxKart (0.8,1), works only over Ogles2, and its really different game, just with the same name.

So, plz, rename new suprtuxkart.lha to supertuxkart\_081.lha, and I will reupload old one as supertuxkart.lha, or, as supertuxkart\_061.lha.

They both different games, with the same name, and I can't call it anyhow different...

Also, screenshots, of course, didn't fit anymore.

Can that be fixed plz? I.e. put old archive back, and that one makes as supertuxkart\_081 ?

If old archive deleted now, I can reupload it again, but then all statistics and screenshots die.

The best way, of course, is to put back the old archives and rename the new one to supertuxkart\_081 as I do from beginning.

That is issue because not everyone has ogles2 supported cards and minigl based archive just disappear

Thanks!
