Yeah, will do it like that, will re-upload new one with ogles2 name and old one with minigl name.

Quote:

OS4Depot does not allow version names in the file names, nor several versions of the same file.

It's not that it version in names, it mostly like for example different versions of the same diskmag: hugi37, hugi38, hugi39, etc. All different, while the same name.

edit: I was lucky enough to download old archive and old description from se.os4depot.net while it not syncs with the main one :) So once 12 hours passed I will replace things (as for now I upload more than 9 files, so blocked for 12 hours)
