I just uploaded at os4depot the new version of aiostreams v1.5 with a lot of changes. Now there is support for Wasd.tv website for my Russian frinds out there. And if you like Peertube, there is a new script supporting those video instances.

To mention a few:

- * Added Wasd.tv script
- * Added PeerTube script
- * Fixed skaitv.py script to support the latest changes of the website
- * Changed the place of the video qualities lists by separating them from the configuration file to a new file named vqw.py
- * Added a full changelog file
- * Changed the scripts' descriptions on help request

As always, if you have any request or you would like to report a problem you discovered, go to:
