URL:

On my system I have installed version 2.39, and doesn't ask me for an update, although I have www.amiupdate.net at the server list and it is active.

Is there a way to force the update?

at au.log I see

20:36:57 Synchronising with server: 'www.amiupdate.net'...

20:36:57 Requesting HTTP header file from server...

20:36:57 Trying to connect to: www.amiupdate.net on port: 80

20:38:12 Failed

20:38:12 Failed to establish connection to: www.amiupdate.net error: Connection to the server failed

20:38:12 Failed to receive HTTP header file...

20:38:12 HTTPFetch error: Transferring the file was not possible due to a previous error
