Ah yes you are right ...

Aniway as i'm here can i ask you a minor modification in amiupdate.cd ?

Actually in amiupdate.cd there is this string:

Quote:

A %s-reset is required before running the new version of AmiUpdate.\n\n\33c\33bThe reboot will happen after pressing %s.

The interesting part is that ".. pressing %s." contains this "%s" that in reality is merely an "OK" string ..

That's fine, however elsewhere as i changed the "OK" to be a pressable button like this: "\_OK"

Now everytime that specific requester will be opened, i have the ok string passed in the requester as an "\_ok" ... that of course is wrong !

So, here the request: can you add in amiupdate.cd another "OK" specific string ONLY for that variable a let the current "OK" string only for pressable buttons ?
