Can anyone help me with that:

```
#include <string>
#include <sstream>
#include <unordered_map>
#include <ostream>

#ifdef __amigaos4__
namespace std {
    typedef basic_string<wchar_t> wstring;
}
#endif

int main()
{
    std::unordered_map<std::wstring, std::wstring> m_translations;
}
```

When compiling over Newlib, it brings me lots of heavy errors from include/c++/8.2.0/bits/hashtable.h, there is the output:

http://kas1e.mikendezign.com/aos4/adtools/output_unordered_map.txt

When I build the same test case over clib2, all fine.

Any ideas? Thanks!
