For first forget about any RadeonHD v1 or RadeonHD v2. It's in real abandoned versions. You need only RadeonHD v3: it is a faster, bugless, and feature-rich version in comparison with all others.

As for whole mess with all different Enhancers I can't help, for most of us it was always unclear why to create such a bunch of different versions and subversions, and why not make just a single version, but all I can say, you need RadeonHD v3, and latest ogles2/warp3dnova. From there they come in that mess I can't say :) Probably it should be some latest Enhancer Plus to have it all.
