I find the OS4 version of BarsnPipes extremely flakey. It will sometimes lock up in the Note Editor, and the MIDI IN tool always gives me a crash when changing the connection.

Good to know. Plus I was not able to load any MIDI file. I have a tool/module inside Accesories(?) dir but BnP does not see it.

...the interface is truly horrible

Yeah, it burning my eyes!

Quote:

Horny, while much less powerful feature-wise, at least resembles a relatively modern sequencer and lets you do basic composing without having to reboot all the time.

Ok, so I have to try it with other than SoftSyn sounds

Is there a guide or doc for HD-Rec? It looks fantastic and has a working sound module built in.

One more question. The fastest way to see if keyboard works with camd.library?
