Sorry, never used HDRec, so I can't comment on that 😞

the fastest way to see if keyboard works with camd.library?

Install the PianoMeter utility from [Christian Buchner's CAMD Toolkit](#). Start the program, select the very first command from the menu, choose your keyboard's MIDI IN cluster, and then press a few keys on the MIDI keyboard. If it works with CAMD, the utility's virtual keyboard gadget will show the pressed keys.
