h.264 is a [video decoding standard](#) which is used e.g. in html5 video players.

Since video replay is slow on AmigaOS4 due to lack of hardware decoding and if you can do without videos, it's probably best to turn it off, yes (you may come across some sites that stop working though).

I have everything turned off in the MEDIA tab, but there are still sites that hog the cpu.

If you really want to speed things up you can turn off "Play animations", "Load images automatically" and "Print backgrounds" in the CONTENT tab, but then sites will pretty much break (still possible to read stuff though).
