Hey devs,

is there an easy method to create an amigaos4 .library file out of a .a library?

e.g. (and no i'm not trying to do that, it's just meant as an example)

Quote:

```
libboost.a --> boost.library
```

Something like (yes, i know this gcc switch doesn't exist...again, it's an example)

Quote:

```
gcc -clibrary libboost.a -o boost.library
```

Any help appreciated
