URL:

The Makefile should more or less be fine now.

```
Next problem: gcc:bin/g++ -MM -athread=native -O2 -W -Wall -I.. -std=c++11 -DTASKRUNNER_LOGERR  
-DTASKRUNNER_LOGWARN -DTASKRUNNER_LOGINFO -MT ../framework/beta.o ../framework/beta.cpp >  
../framework/beta.d  
gcc:bin/g++: unable to open redirection file  
gcc:bin/g++ failed returncode 10  
make: *** [../framework/beta.d] Error 10
```

This works on the cross compiler I've set up in Cygwin under Windows, with the help of Kas1e. Now I'm trying to make exactly the same code on a real OS 4.1 machine, with the help of Codebench. G++ 8.3.0 in both cases.
