Well found the issue, and it was of course a mistake by me ..

I changed the configuration in a wrong file, i was applied the "dynamic" in dosbox.conf file as you said, but as i'm using RunInDosBox along with DOSBox i had to apply that settings into the RunInDosBox.conf file instead !

I was completely forgot about it, i've installed it years ago 😞

Well, just tested demo and .. it's faster a lot !!...

With "normal" settings i have: 0.6

But setting as dynamic i got now: 2.6

Speed increase is very visible without the need to benchmark it .. now i will test some real games 😊

Edit: tested MK2 aswell..

Lot faster, for sure still not at full speed but now close to be usable 😊
