92 is DOSIFace.Input according to offsetof(). Native threads used IDOS instead of iDOS. IDOS seemed to be NULL.

Try the following patch: <https://github.com/AmigaPorts/SDL/comm...95448630f60a40c6501cdc6c9>

I don't understand why your SDL build doesn't have debug symbols though? You can strip them out when they are not needed anymore.
