Hi,

I have achieved good speed with odyssey

but I have to ask again

what is this command for in Odyssey

Preferences - General CON: 0/0/640/240 / OWB Output Window / CLOSE / AUTO / WAIT

I tried to modify it but it seems to have no impact on Odyssey.

Also I noticed this, if I keep the mouse cursor out of the Odyssey window the movie plays smoothly.

While if the mouse cursor is inside the Odyssey window it seems to slow it down.

Can I somehow act on the AmigaOS4.1FE preferences of the workbench to improve this "lag"

Thanks for any replies, I have been emulating 4.1 for a long time and now I am very satisfied with the result.

But to learn I have to ask.

Thanks again.

here a video, although it is not important but perhaps you understand better what I mean.
