Today I bought the ztools version 3.1 through Amistore
zzd10h (thanks for your program)

So I started editing the tasks to see if I can work better with Odyssey.

I have modified the following parameters:

Odyssey at 127

Odyssey (media player) at 127

Odyssey java script at 127

Odyssey timer at 127

ethernet.device to 127 (in my case the driver I use via winuae)

Now the videos open immediately without jerks and are very fluid.

Obviously I have to continue experimenting, but I'm happy.

Only problem, if I move the cursor inside Odyssey while the video is playing it jerks.

If I drag the cursor out of the Odyssey window, everything resumes normally.

Are the modified tasks permanent?

Or do they reset themselves when the system restarts?

Side note:

I have been told that this problem of the cursor inside the window also occurs on the X1000 real machine
is there a solution by acting on the tasks?

Thanks for any suggestions, and your patience.

@Thematic

Thanks for your answer, at the moment I tried to eliminate it it seems to change nothing, I will do other tests
