giving a task a priority of 127 is prioritizing this task over anything else !

when I look at my X-5000 system the highest priority is 100 (rhd\_gc whatever that is) and the next one is at 21 (ClickToFront commodity), Sysmon is at 2 and Odyssey at 0.

so increasing all Odyssey related to 127 will then give no cpu time to the other tasks even the mouse so I would speculate that it is the reason why you get slowdowns with mouse focusing on the yt video.

maybe you could run Odyssey on a seperate screen instead of on the WB to see if there is any difference...
