I'm looking for testers who could run <http://capehill.kapsi.fi/ahi/AhiStereoTest.lha> and tell whether left and right sound channels are separated or does it sound mono.

I'm using an EMU10K sound card and it sounds mono.

PS. test program might be loud, turn down the volume first!

EDIT: after running the Mixer tool, I have stereo audio. Something seems to have been wrong with my audio settings then?
