So I purchased and installed the Enhancer Software Graphics upgrade. Now I can boot into Workbench, but within a second the whole system freezes and I need to do a hard reboot.

If I bypass the user-startup (holding down the left shift key) then it boots into Workbench and doesn't freeze until I double-click any of the icons. Booting Workbench like this, I can move my mouse as much as I want; I can single-click any icon with no problems; but as soon as I double-click any of them, then the system locks up.
