@arfcarl

It seems weird that it would be a uboot issue, since it boots all the way into Workbench (then freezes); but I'm sure Hans understands what the problem is.

@benny

I'd love to be able to find a passively cooled graphics card that works with my SAM460; but I can't find anywhere in the U.S. to buy one.

@everyone

So it looks like I'm going to need to buy another graphics card. I'd really like to avoid wasting money on another card that doesn't work. Does this one appear to be one that should work with a SAM460? (I don't care about it taking up two slots.)
