I have built this using the instructions. This was using a new install of Cygnix and using also the same paths as in the HOW\_TO\_BUILD\_AMIGAOS4.txt document.

The only change i made was for the initial 'make' line to try and speed it up. I used "make -f Makefile owb -j\$(nproc)" instead of "make -f Makefile owb -j4" which uses the number of threads available on my CPU instead of using a set number (in this case 4).

Thanks for everything you've done to get this in place.
