The 1.1.0/1.1.1 series has some API changes, but I suspect if you can tweak Odyssey to work with it, it'd be able to connect to more sites

Tried to use latest openssl from os4depot, and api changes there is no big issue for Odyssey's code itself, but for CURL which is use SSL for connections.

They (openssl) no more provide with SSLeay() and related stuff, and so that version of Curl which we use (7.28.1) and which is prove-tested-works-fine can't be linked over new openssl. But newer versions of Curl are harder because it need our-custom-threading-resolver implementation as i have in 7.28.1 , so it need some work for sure.
