Would make sense for you all guys if what needs to be done go to issues section of github, where we can add all the suggestions from os4depot, as Roman mentioned? That way all thing needed to be done will be in one place for everyone to find it, and keep this thread for discussion as well. Otherwise, necessary information will be scattered.

In my opinion, there are ways to watch online video on AmigaOS 4 using external scripts and ffmpeg, which works pretty well. I don't say that it is not necessary, but maybe having a newer version of webkit and some serious bugfixes is more crucial right now, what do you think?

In github there is projects section, where tasks can be created on what needs to be done. So, there can be visibility on what is on the pipeline and what is currently in WIP. That way people will know what needs to be done, to void duplicate work by being more transparent.

From my side, I will start working on a development environment based on docker, which will be able to compile Odyssey out of the box. I will surely need help from you, but first I will use Roman's guides.
