Got it build on Linux. Not tested yet.

There was a strange issue: during compilation "BCRefPtrWTF.h" couldn't be found as if some include path was missing. This file exists in BAL/Types/WTF. I just ended up commenting it out for now. It was only included in one place.

Second small issue some other Linux user might bump into: [https://github.com/kas1e/Odyssey/blob/ ...
O_BUILD_AMIGAOS4.txt#L162](https://github.com/kas1e/Odyssey/blob/.../O_BUILD_AMIGAOS4.txt#L162) "OwbLauncher" after -o should be written like "OWBLauncher".
