Nice, thank you

I have two requests that bothers me for a long time now, if possible.

1) Could you

a) Add "DuckDuckGo" to the list of Search Engines (Windows/Search Engines)

Quote:

DuckDuckGo

<https://duckduckgo.com/?q=%s&t=h>

d

and

b) remove the forced Google search when one types into the address field, or rather replace it with the search engine that is set to be the first entry in the Search engines list.

and

2) Could you remove the "automatic completion suggestion" when typing into the search field (on the top right)?

This one is annoying as hell as my typing is faster than the suggestions PD menu and i end up with broken entries, because the "suggestion" tends to "eat" the first character i typed once the PD menu is gone again.

Thanks
