Well well, ok i know too much problems at once .. but probably this time i have found a big one 😞

Latest beta version have problem to download things, maybe again because curl or don't know what

- Transifex website doesn't load anymore the strings to translate, the page remained blank

- Download button with certain website doesn't work anymore, for example try to download Inviyya game by pressing the red button

<https://tigerskunk.itch.io/inviyya>

Both sites have problem with latest r5 beta_02, but works fine with stable official version of odyssey .. i fear in end will be forced to revert a library
