Try to unpack beta02 to ram, and then retestest everything again.

Quote:

Both sites have problem with latest r5 beta_02, but works fine with stable official version of odyssey .. i fear in end will be forced to revert a library

All the libraries should be updated, because its the only way move forward, be it 1.25, or new core, or whatever else.

Try everything from RAM: , fresh unpacked beta02. Then if issue there, fresh unpack to RAM beta01 and try that one. You know how to test things i am sure :) And i shomehow sure you mess with spoofing options at night. And plz, at moment wait till other will read/help with PNG issues plz, as topic will be flooded.
