Better fresh install all the time, that will save us from all kind of possible issues which may happens because of different lbraries and their new/old config files. Different fontconfig caches, .db files, fonts libs, and co, everything can be cause of issues. So fresh install is must.

@ktadd

In case with beta3 there was added new filetype/mimetype, so if you has for example some manually added things in prefs, then new binary may cause issues yep, as things shifts/changes. Better all the time fresh install for sure.
