Thanks for the new beta 03 it's getting faster.

Now the links pointing to Youtube on sites like EAB etc. also work well.

I wanted to ask if it was possible in some way, to add spoofing to the following user-agent:

```
Mozilla / 5.0 (Nintendo WiiU) AppleWebKit / 534.52 (KHTML, like Gecko) NX / {Version No} NintendoBrowser /  
{Version No} .US
```

Or even more recent

In my example I can modify the user-agent with the following line to the user-startup

```
; BEGIN OWB  
SETENV OWB_USER_AGENT "Mozilla/5.0 (Nintendo WiiU) AppleWebKit/534.52 (KHTML, like Gecko)  
NX/{Version No} NintendoBrowser/{Version No}.US"  
; END OWB
```

but with this Beta 03 version it seems to slow down the browser, therefore I had to eliminate it from the user-startup.

Currently in my experience it seems the fastest user agent for Odyssey.

I'm probably wrong, but it seems to be faster for the 4.1FE update1.

Thanks for a possible reply.

Do you consider my comment unnecessary if it is not in line with the current project.

@All

Thank you all
